Onboarding Accelerator - Password-less Authentication

Before you move away from passwords, you need something to replace them. With Windows 10, Microsoft introduced Windows Hello for Business, a strong, hardware protected two-factor credential that enables single-sign on to Azure Active Directory and Active Directory.
Deploying Windows Hello for Business is the first step towards password-less. With Windows Hello for Business deployed, it coexists with password nicely.
The **Onboarding Accelerator (OA) - Password-less Authentication** enables a group of maximum 20 users in your organization for Windows Hello for Business. Allowing you to learn and grow and enable the next group.

Outcomes

Plan and deploy Windows Hello for Business with Premier Field Engineering services and pre-defined engagements that will speed up your project through interactive planning and working sessions. In this first step, passwords and Windows Hello for Business must coexist. You want to validate that while your targeted work personas can sign in and unlock using Windows Hello for Business, but they can also sign-in, unlock, and use passwords as needed.

Planning and working sessions

Guidance through interactive sessions

Accelerate the deployment process

Decrease the time to define the requirements and dependencies

Reduce the risk of impactful events

Alignment with Microsoft recommended deployment practices

Capabilities

01 Co-existence scenario

In the first step towards password-less authentication, passwords and Windows Hello for Business must coexist.

02 Prerequisites

Do you have the infrastructure ready for the scenario that works best for your organization?

03 Password usage

Do you know how what applications will require users to enter passwords??

04 Meet security requirements

Do you need to meet security requirements for users' passwords?

Duration: 1 week

Day 1	Day 2	Day 3	Day 4	Day 5
Remotely - Scoping and Prerequisites validation	Identified pilot group briefing	Deploy Windows Hello for Business to the pilot group	Work with pilot group to log passwords and applications	Determining next steps and actions

Service statement

" *Onboarding Accelerator (OA) is a type of service designed to assist Microsoft customers during deployment or migration scenarios in order to address customer needs aligned with their business requirements. A solution that was created from the field learnings, making it a perfect experience over the time!*

Additional details

In scope:
- Assessment, Knowledge Transfer and approved deployment guidance
- Sizing tools guidance
- Test and validation guidance
- Deployment assistance

Out of scope:
- Setting up infrastructure
- Vision/scope document
- Project status report
- Manage deadlines
- Schedule

Supported Windows Hello for Business scenarios
- Azure AD Join Single Sign-on Deployment Guides
- On Premises Key Trust Deployment
- Hybrid Azure AD joined Key Trust Deployment
- On Premises Certificate Trust Deployment

This service can be repeated to assist with onboarding of additional users.
